

SI Modal

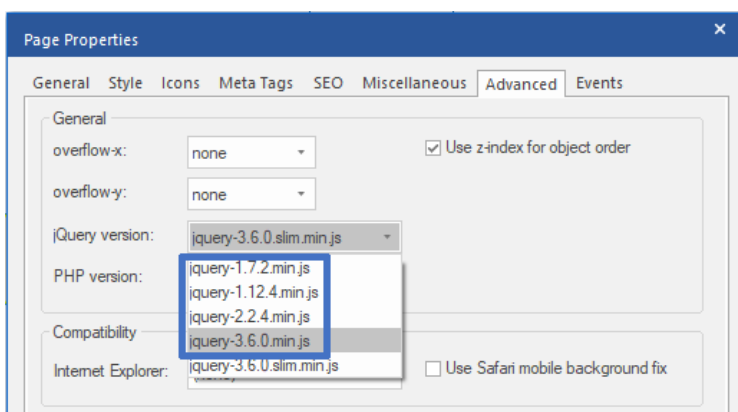

Developer: <https://github.com/solutioninnovators/SI-Modal>

Version: 2.0.0.0

This extension is designed as a replacement for Fancybox2 which does not work correctly with the latest versions of JQuery.

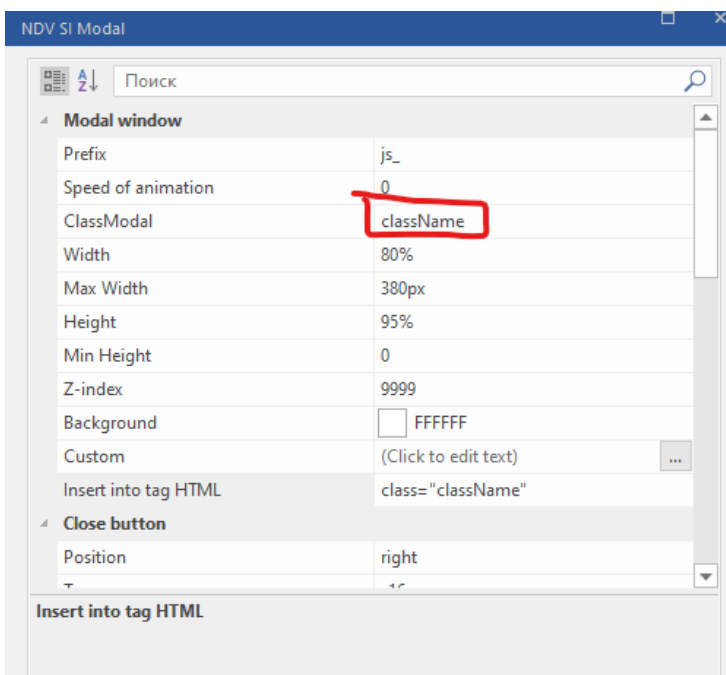

1. Configure WysiWYG Web Builder

Install JQuery on the page

JQuery slim.min.js is not supported!

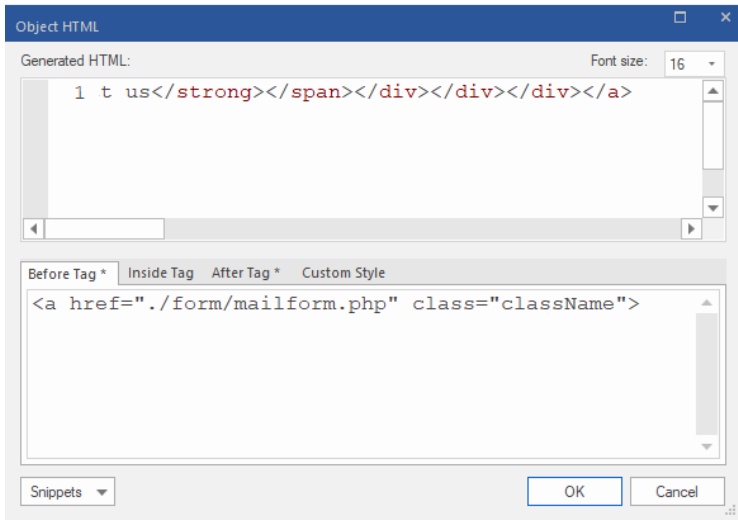

2. Set the modal window class

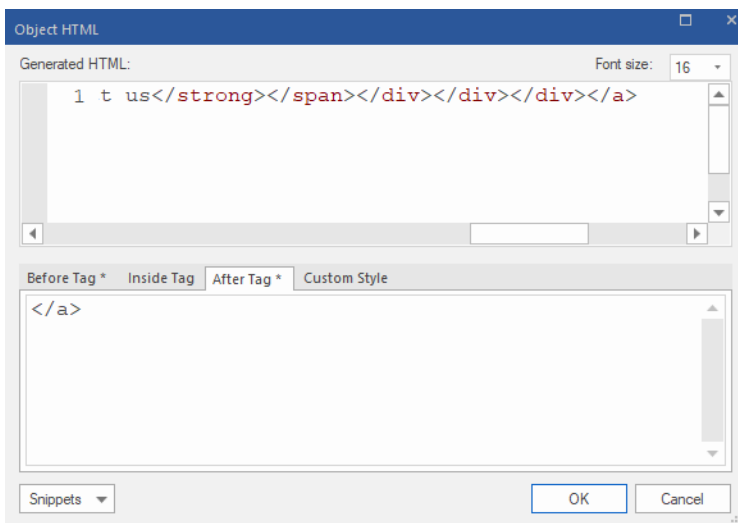

3. Set the reference in the object (Shape, Icon, Layer, and others).

Open the HTML object

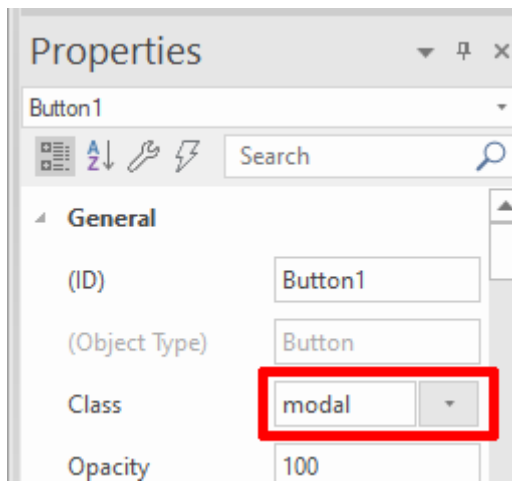

Specify a class reference in **Before the tag** ``

Close the `` After Tag

For the Button tool, you can use Class.

Attention!

A preview of a modal page is only available on the published site.
